

# COVID Champion

---

To play COVID Champion, please download our source code using one of the following depending on your configuration:

- HTTPS: `git clone https://github.com/pasolano/gamedes.git`
- SSH: `git clone git@github.com:pasolano/gamedes.git`
- GitHub CLI: `gh repo clone pasolano/gamedes`

Once downloaded, please compile our game by doing the following:

1. Use your terminal to `cd` into the `gamedes` directory. Assuming you did not change paths after downloading the repository, use `cd gamedes`
2. Use `mkdir` to create a folder named "release" using `mkdir release`
3. Use `cd` once again to move into the release folder using `cd release`
4. Run `cmake ..` to generate the cmake files necessary to compile the game, or the equivalent command on your system
5. Use `make` (or the equivalent command on your system) to compile the binary for the game
6. Finally, play our game with `.\main.exe`, `./main`, or whatever the binary name is on your system. You can use `ls` or `dir` to check the filename

If you have any questions, please reach out to our team leader [Pablo](#)

Thank you for playing our game, and have fun!
